Abbott Diagnostics Division

Lisnamuck, Co. Longford

Description

The DualProof System was installed to provide a Type A Barrier Protection to the below ground reinforced concrete lift-pit of this major extension constructed by John Paul Construction to the well-known Healthcare Company located close to Longford town.

The DualProof System was selected for use because it provides full protection to the reinforced concrete against ground water, radon and methane gas and other ground contaminants.

CEMflex VB Plate which has an 80-year service life expectancy was used to detail the non-movement joints in the below ground reinforced concrete.
