

Parnell Cottages

Malahide, Co. Dublin

Description

The works consisted of the refurbishment of a beautiful cottage with a new extension added to the back. The new works included a well-designed below ground basement that has a curved feature wall at the side.

DualProof Membrane was used to waterproof the base-slab and because of the curved wall, it was decided to use DualProof Membrane post applied to provide complete protection for the below ground structure. The application of the DualProof System was completed by the main contractor Gaffco Construction.
